RE: New Product Review of the Hydroworks HydroStorm Stormwater Quality Structures

Dear Mr. Bryant:

Your request for new product review of the HydroStorm (HS) products for storm water quality has been completed. The New Products Committee of the Department of Public Works has recommended approval the HS-3, HS-4, HS-5, HS-6, HS-7, HS-8, HS-9, HS-10 and HS-12 models under the City of Indianapolis/Marion County Stormwater Management District Manufactured Stormwater Quality Treatment System Evaluation Criteria dated October 2018.

These products have been reapproved by for use on private development and public projects after October 1, 2019 with revised maximum treatment flow rates. A revised City of Indianapolis Stormwater Quality Unit Selection Guide will be posted on the City's website on October 1, 2019 that will lists these models and include the approved treatment flow rates.

Please note the following:

- Units shall be installed in compliance with the current City of Indianapolis Stormwater Specifications Manual. The outer structure shall also comply with the current manual specifications.
- This approval applies to units as documented by the data submitted for this recertification review. Changes in materials of construction, overall unit dimensions, or dimensions of the internal components shall invalidate this approval and require submittal for re-approval under current evaluation criteria. This would include the square units which were listed but not tested or reviewed by NJCAT.
- Units are approved for the configuration as reviewed by NJCAT. Grated inlets and multiple pipe side inlet configurations were not tested by the manufacturer.
- The peak 10% exceedance (10-year) flow rate for on-line units may not exceed the maximum rate tested for scour.
- Note use of the units on City of Indianapolis projects shall be approved on a case-by-case basis by the project engineer.

September 20, 2019
Mr. Graham Bryant
